

Project Title: Create IAM Groups and Assign Permissions

Aim

To create IAM groups, assign AWS managed policies to the groups, create IAM users, and add them to their respective groups for centralized and role-based access management.

Prerequisites

- AWS Account
 - AWS Management Console
 - Internet Connectivity
-

Procedure

Step 1: Open IAM Dashboard

1. Sign in to the AWS Management Console.
2. Search for **IAM**.
3. Open the **IAM Dashboard**.
4. In the left navigation pane, click **User groups**.

Step 2: Create the Developers Group

1. Click **Create group**.
2. Enter the following details:

Property	Value
Group Name	Developers

3. Click **Next**.

Step 3: Assign Permissions to the Developers Group

After clicking **Next**, you'll reach the **Add permissions** page.

1. In the **Permissions policies** section, search for:
 - **AmazonEC2FullAccess**
 - **AmazonS3ReadOnlyAccess**
2. Select both policies.
3. Click **Next**.
4. Review the configuration.

5. Click **Create group**.

The screenshot shows the AWS IAM console interface. The left sidebar contains the 'Identity and Access Management (IAM)' menu with options like Dashboard, Access Management, Roles, Policies, IAM users, IAM user groups (selected), Identity providers, Account settings, Root access management, and Temporary delegation requests. The main content area displays the 'Policies attached to this user group.' section for the 'Developers' group. It includes a 'Summary' card with the user group name 'Developers', creation time 'July 04, 2026, 01:56 (UTC+05:30)', and ARN 'arn:aws:iam::675167337358:group/Developers'. Below this is the 'Permissions policies (2)' section, which lists two AWS managed policies: 'AmazonEC2FullAccess' and 'AmazonS3ReadOnlyAccess', both with 2 attached entities. The bottom of the console shows the footer with '© 2026, Amazon Web Services, Inc. or its affiliates.' and links for Privacy, Terms, and Cookie preferences.

Step 4: Create the Admins Group

1. Click **Create group**.
2. Enter:

Group Name Admins

Click **Next**.

The screenshot shows the AWS IAM console interface after creating the 'Admins' group. The left sidebar is the same as the previous screenshot. The main content area displays a green notification banner 'Admins user group created.' with a 'View group' button. Below this is the 'IAM user groups (2)' section, which lists two groups: 'Admins' and 'Developers'. The 'Admins' group is shown with 0 users, 0 permissions, and 'Not defined' status, created 'Now'. The 'Developers' group is shown with 0 users, 1 defined permission, and created '4 minutes ago'. The bottom of the console shows the footer with '© 2026, Amazon Web Services, Inc. or its affiliates.' and links for Privacy, Terms, and Cookie preferences.

Step 4: Create the Admins Group

1. Click **Create group**.
2. Enter:

Property	Value
----------	-------

Group Name	Admins
------------	--------

3. Click **Next**.

Step 6: Create User1 and Add to Developers Group

1. Go to **IAM → Users**.
2. Click **Create user**.
3. Enter the user name as **User1**.
4. Complete the user creation process.
5. Open **User1** and go to the **Groups** tab.
6. Click **Add user to groups**.
7. Select the **Developers** group.
8. Click **Add to groups**.

Step 7: Create User2 and Add to Admins Group

1. Go to **IAM** → **Users**.
2. Click **Create user**.
3. Enter the user name as **User2**.
4. Complete the user creation process.
5. Open **User2** and go to the **Groups** tab.
6. Click **Add user to groups**.
7. Select the **Admins** group.
8. Click **Add to groups**.

Result

The **Developers** and **Admins** IAM groups were successfully created, and the required AWS managed policies were assigned to each group. **User1** was successfully added to the **Developers** group, and **User2** was successfully added to the **Admins** group. Both users inherited the permissions assigned to their respective groups.

Conclusion

This project demonstrated how to create IAM groups, assign AWS managed policies, and manage user permissions through group membership. By assigning **User1** to the **Developers** group and **User2** to the **Admins** group, permissions were managed efficiently without attaching policies directly to individual users. This approach follows AWS security best practices and simplifies access management.
